

LOHIT P

Software Engineer | Mobile, Full-Stack & Platform Engineering

Hyderabad, India | +91 8629924736 | 00lohit@gmail.com | lohitcode.com | github.com/lohitcode

PROFILE

Software engineer with 4+ years building production products across mobile, web, APIs, data and cloud infrastructure. Particularly strong at React Native and Expo, including team coordination, testing, CI/CD, store operations and production releases. Also works across TypeScript APIs, PostgreSQL, Go, AWS and observability. Uses AI to accelerate delivery while retaining responsibility for architecture, review and correctness.

REACT NATIVE EXPERTISE

Release ownership: EAS Build, EAS Submit, automated store submissions, App Store and Play Store compliance, review responses, rejection fixes and production releases

Delivery systems: mobile CI/CD, environment-specific builds, Expo OTA updates, release channels, crash monitoring and rollout validation

Quality: Maestro E2E tests, release checks, failure-path validation, Sentry and production analytics

Product engineering: Expo, Expo Router, SQLite, offline-first data, push notifications, deep links, Reanimated, LinearGradient, FlashList, forms and state management

Leadership: led React Native delivery, supported developers, reviewed implementation choices and worked closely with designers on product assets and store requirements

PROFESSIONAL EXPERIENCE

Full-Stack & Infrastructure Engineer | Mar 2024 - May 2026

Turtil | Hyderabad, India

- Led React Native and Expo delivery, supported mobile developers and established shared implementation, testing and release practices.
- Managed the complete iOS and Android release lifecycle: EAS builds, automated submissions, store compliance, review responses, issue resolution and production rollout.
- Built mobile CI/CD and OTA workflows with environment-aware configuration, release validation and safe Expo Updates.
- Implemented offline timetable access with Expo SQLite so schedules remained available during unreliable or unavailable network conditions.
- Added Maestro E2E coverage, crash monitoring, analytics and performance improvements using FlashList, memoization and lazy loading.
- Partnered closely with designers to obtain production assets, resolve platform requirements and preserve consistent iOS and Android experiences.

BROADER PRODUCT & PLATFORM WORK

- Built full-stack features using TypeScript, React/Next.js, Hono, PostgreSQL, Drizzle and Zod, including authentication, payments, analytics and real-time workflows.
- Engineered CI/CD with change detection, parallel validation, Playwright testing and coverage gates; independently reviewed AI-assisted changes before production.
- Operated AWS infrastructure with Terraform, ECS, EC2, RDS, Lambda, S3 and CloudFront, supported by OpenTelemetry, Grafana, Prometheus, Loki and alerts.
- Built Go services for Redis-backed background jobs and runner orchestration with retries, deduplication, scheduling and operational metrics.

Mobile Application & Backend Engineer | Feb 2022 - Dec 2023

Hyposoft Global Solutions | Hyderabad, India

- Built and shipped React Native products for cold-storage commerce and sports communities, including booking, inventory, social and real-time notification workflows.
- Implemented Node.js and MongoDB backends, Socket.IO features, Firebase Cloud Messaging and payment flows using Razorpay, PhonePe and Paytm.
- Delivered responsive mobile interfaces using Reanimated, utility-first styling and close product collaboration.

Frontend & Mobile Application Engineer - Intern | Dec 2021 - Jan 2022

Hyposoft Global Solutions | Hyderabad, India

- Built the published FarmOR Partner and FarmOR Kisaan React Native applications for purchasing, orders and inventory, plus FarmOR's responsive website.

Published apps: [FarmOR Partner \(1K+ downloads\)](#) | [FarmOR Kisaan](#)

INDEPENDENT STUDY & PRODUCT DEVELOPMENT

Independent Study & Builder | May 2026 - Present

Self-directed | Hyderabad, India

- Strengthening Go, PostgreSQL/SQL, data structures, networking, operating systems, security, deployment and system-design fundamentals through implementation-led study.
- Building production-shaped Go HTTP services with pgx, migrations and SQLC while documenting each concept and defending implementation decisions independently.

github.com/lohitcode/computer-science-from-scratch

TECHNICAL FOUNDATION

Languages: TypeScript, JavaScript, Go and SQL

Backend & data: Node.js, Hono, Express, PostgreSQL, Drizzle, Redis/Valkey, Async, REST and Socket.IO

Cloud & operations: AWS, Terraform, Docker, GitHub Actions, OpenTelemetry, Grafana, Sentry and PostHog

Web: React, Next.js, Tailwind CSS, TanStack Query, Zustand and React Hook Form

EDUCATION

Bachelor of Technology (B.Tech.) | 2017 - 2021

Malla Reddy Institute of Technology & Science, Hyderabad
